<b>ALL GRAM-POSITIVE BACTERIA</b>		177	100	81	81		90	10	10	10	10	9	10		29	66	10	92				99		
<i>Enterococcus faecalis</i> , all isolates		138	78	99	99		99									16	82		98				100	100
- vancomycin-susceptible		138	78	99	99		99									16	82		98				100	100
- vancomycin-resistant (VRE)		0	0																					
<i>Enterococcus faecium</i> , all isolates		18	10	17	17		17									72	11		33				94	100
- vancomycin-susceptible		17	10	18	18		18									76	12		35				100	100
- vancomycin-resistant (VRE)		1	1	0	0		0									0	0		0				0	100
- vancomycin-susceptible (vanA+)		0	0																					
<i>Staphylococcus aureus</i> , all isolates		17	10				94	94	94	94	94	94	94			89		100	100				100	100
- methicillin-susceptible		16	9				100	100	100	100	100	100	100			88		100	100				100	100
- methicillin-resistant (MRSA)		1	1				0	0	0	0	0	0	0			100		100	100				100	100
<i>Enterococcus</i> species		2	1	100	100		100									0	50		100				100	
Coagulase-negative staphylococci		1	1				100	100	100	100	100					100		100	100				100	100
<i>Enterococcus gallinarum</i>		1	1	100	100		100									0	100		100				0	

**General Notes:**

- Statistical validity of estimates of percent susceptibility for organisms for which there are fewer than 30 isolates reported is limited. Please take this into consideration when interpreting the reported results.
- Some organisms for which there were only very small numbers have been excluded from this report; however the total number of "ALL BACTERIA", "ALL GRAM-NEGATIVE BACTERIA", and "ALL GRAM-POSITIVE BACTERIA" listed includes these organisms.
- Reported susceptibilities for "ALL BACTERIA", "ALL GRAM-NEGATIVE BACTERIA", and "ALL GRAM-POSITIVE BACTERIA" reflect estimates only based on the weighted average of susceptibilities for all organisms included on this report as well as those that have been excluded, with assumptions made for those drugs for which susceptibilities were not tested.

➤ Susceptibility to doxycycline was predicted based on tetracycline susceptibility testing results.

**Year-Specific Notes:**

- Susceptibility for cefazolin are not available for Gram-negative isolates from non-sterile site specimens for the current year.

**Toronto Western Hospital ANTIBIOTIC**  
**All Inpatients**  
**January 1, 2016 - December 31, 2016**

**All Non-Urine Isolates – % Susceptible**

**General Notes:**

➢ Statistical validity of percent susceptibility for organisms for which there are fewer than 30 isolates reported is limited. Please take this into consideration when interpreting the reported results.

➢ Some organisms for which there were only very small numbers have been excluded from this report; however the total number of "ALL BACTERIA", "ALL GRAM-NEGATIVE BACTERIA", and "ALL GRAM-POSITIVE BACTERIA" listed includes these organisms.

➢ Reported susceptibilities for "ALL BACTERIA", "ALL GRAM-NEGATIVE BACTERIA", and "ALL GRAM-POSITIVE BACTERIA" reflect estimates only based on the weighted average of susceptibilities for all organisms included on this report as well as those that have been excluded, with assumptions made for those drugs for which susceptibilities were not tested.

➢ Susceptibility to doxycycline was predicted based on tetracycline susceptibility testing results.

**Year-Specific Notes:**

➢ Susceptibility for cefazolin are not available for Gram-negative isolates from non-sterile site specimens for the current year.

**Organism-Specific Notes:**

^ *M. catarrhalis*: Susceptibility testing is not routinely performed. Most isolates are resistant to ampicillin and amoxicillin but are generally susceptible to other antibiotics commonly used for respiratory infections.

^^ *H. influenzae* and *H. parainfluenzae*: Susceptibility to ampicillin was determined using beta-lactamase testing. Beta-lactamase-positive isolates are resistant to ampicillin but are generally susceptible to amoxicillin-clavulanic acid and cefuroxime.

\*\* Beta-hemolytic streptococci: Susceptibility testing to penicillin is not routinely performed since resistant strains have not been recognized. All isolates are considered susceptible to penicillin.

<sup>a</sup> Viridans group streptococci: Please note that only a small proportion of these isolates were tested for susceptibilities. Please take this into consideration when interpreting the reported results.

<sup>b</sup> *S. maltophilia*: Susceptibility to moxifloxacin was predicted based on levofloxacin susceptibility testing results.
