Project Team

Ms. Mary Agnes Beduz, RN, MN, PhD (student)
Director, Nursing Education and Development
Mount Sinai Hospital

Dr. Robert Maunder, MD
Staff Psychiatrist
Mount Sinai Hospital

Nathalie Peladeau, RN, MScN
Clinical Nurse Specialist
Mount Sinai Hospital

Acknowledgments

The project team would like to acknowledge the individuals whose work contributed to the success of the Interprofessional Collaborative Assessment and Management of Illness Related Anxiety Project, and the creation of this Resource Manual. Their comprehensive insights were invaluable throughout this project; this guide would not have been possible without them.

We would like to thank Barbara Duffey-Rosenstein, Maricel Teodoro, Inger Tai and Judith Healey for their work on the development of the electronic version of the Anxiety Measurement Assessment Tool. Appreciation goes to Micheline Lang, for her work on the development of the eLearning Module.

We would like to thank our team of clinical experts (Penny Dooks, Christina Fabbruzzo, Monica Frecea, Carnett Howell, Elaheh Sarvi, and Liandi Zhang) whose experience and knowledge was essential to the development and implementation of a new practice standard. We would also like to express our gratitude to our patient and family advisors who generously shared with us their realities, insights and wisdom and gave voice to the creation of the patient scenarios; they confirmed for us the fundamental need for this work. Special appreciation is owed to Leslie Vincent, Senior Vice President Patient Care and Chief Nursing Executive for her support of this initiative. Finally we would like to recognize the dedication and commitment of the healthcare providers who enthusiastically participated in this initiative and have embraced the new practice standard with the hope of better meeting the emotional needs of our patients.
Interprofessional Collaborative Assessment and Management of Illness Related Anxiety (iCAMIRA)

Facilitator’s Resource Manual

References

“Within the complexity of our current healthcare system, meeting the emotional needs of patients is a challenge for all healthcare professionals. The extent to which different healthcare professionals work well together can affect the quality of the healthcare that they provide. If there are problems in how healthcare professionals communicate and interact with each other, then problems in patient care can occur. Interprofessional educational strategies focused on giving healthcare professionals a common language and understanding of patient needs can be effective in achieving patient centred care goals.”

Mary Agnes Beduz
Director of Nursing Education and Development
